## Glossary

Arthropods – group of animals including crabs, prawns, shrimps and barnacles

Molluscs – group of animals including sea snails, sea slugs and bivalves

Cnidarians – group of animals including anemones, hydroids and jellyfish

Annelids – group of animals including worms

Bryozoans – group of animals forming a moss like colony of single celled creatures

Porifera – group of animals including sponges

Pisces – group of animals including fish

Ascidiants – group of animals called sea squirts

Echinoderms – group of animals including starfish and seurchins

Algae – plants called seaweed

Intertidal – the area of coast between mean high water and mean low water

CCIS – climate change indicator species

## 1. Survey rationale

Coastal Creatures was a two year project (July 2016 - September 2018) which focused on the diverse marine and coastal natural heritage of the North Devon Coast Areas of Outstanding Natural Beauty (AONB). During the project we provided citizen science opportunities to identify, record, enjoy and learn about the varied flora and fauna of our diverse intertidal and coastal habitats. To better understand our coast, we focused on four beaches along the AONB coast with a range of habitats and species. The focus beaches were Northam Burrows (Westward Ho! and Greysands), Croyde, Lee Bay and Combe Martin. The species census surveys which are the focus of this report formed the majority of our citizen science surveying effort.

## 2. Methodology

### 2.1. Survey locations

During February 2017 and July 2018 as part of the Coastal Creatures project a series of 23 species census surveys were undertaken on four rocky shores (in the intertidal zone) along the North Devon Coast AONB (Figure 1):

- Combe Martin (five successful surveys, one cancelled survey)
- Lee Bay (six successful surveys)
- Croyde (six successful surveys)
- Westward Ho! (six successful surveys, one cancelled survey).

Figure 1: Map of the North Devon Coast AONB with target beaches highlighted.

## 2.2 Volunteer training and survey protocol

Volunteers were recruited and then during a workshop in February 2017, they were trained on how to complete the survey methodology by the NDC AONB Education and Interpretation Officer. The majority of the survey group were recruited from Coastwise North Devon (<http://www.coastwisenorthdevon.org.uk/>). Other volunteers were recruited via online advertisement, leaflets and posters distributed at festivals and shows.

Below are the instructions given to volunteers to complete the survey.

### *Coastal Creatures Species Census*

*As part of the Coastal Creatures project we will be undertaking a species census across four beaches along the North Devon Coast AONB. To take part in this species census please refer to the following survey methodology:*

1. *The survey will take place over a one-hour period (preferably half an hour either side of low tide).*
2. *In pairs decide who will be the surveyor and who will be the photographer (it is okay to switch roles within the survey time).*
3. *Decide which phylum (species group) you would like to focus on. Alternatively you can choose to do a generalist survey and record everything you find. Please use the corresponding sheet which you would like to use. Use the forms as a guide, there is plenty of space on the back of each sheet for additional species. The phyla being focused on in this survey include:*
  - *arthropods (including crustaceans),*
  - *molluscs,*
  - *cnidarians, annelids, bryozoans, porifera,*
  - *chordates (including vertebrates and ascidians), echinoderms*
  - *and also algae.*
4. *Fill in both your names on the form, date and the camera number you are using.*
5. *It is vital that you take a photo of each species and record photo number(s).*
6. *Record height of species record on shore (H = high, M = middle, L = low) and record the abundance if possible using the SACFOR scale (Appendix 1).*
6. *Once completed return forms and cameras to Cat (NDC AONB Education Officer).*

*Thank you for taking part in the Coastal Creatures species census. Your time and commitment are really appreciated.*

After the surveys, all equipment and records were collected off the beach. Whilst having a cup of tea (to warm up!) we talked over the records and if there were any identification queries. Sometimes there was a field microscope provided to look at any samples in closer detail. Occasionally volunteers took small samples how to identify at a later date under microscopes. All live specimens were required to be returned to the seashore no more than 24 hours after the survey had taken place.

To better familiarise surveyors with species, a general intertidal species identification workshop was provided followed by a series of more in depth species identification workshops which were run by experts in the fields. The optional and free training provided was on the following topics:

- Coastal Creatures survey methodology
- Seaweed identification
- Coastal photography
- Seashore safari training (Coastwise)
- Anemone and hard corals identification
- Crab identification
- Plankton ecology and identification
- Jellyfish and hydroids identification
- Sea slug and snails identification
- Red seaweeds identification

### 2.3. Equipment

Each pair of volunteers were given the following equipment to complete the survey (Figure 2):

- 1 x Nikon Coolpix waterproof, shockproof camera incl. memory card
- 1 x weather writer
- 1 x set of survey forms on their chosen phyla
- 1 x pen
- 1 x identification guide (if required).

Figure 2: Volunteers after a December survey at Westward Ho! beach.

## 2.4. Data input

All species records were transcribed from the paper recording forms to an Excel database, mainly by volunteers and work experience placements. Guidance was provided for these volunteers to correctly transcribe these data. Each record had an accompanying photograph which was uploaded to a computer. Once the data from each survey had been transcribed then it was inputted into the online recording platform: iRecord ([www.brc.ac.uk/irecord/](http://www.brc.ac.uk/irecord/)) which is a filtering platform for the National Biodiversity Atlas (<https://nbnatlas.org/>) which is freely accessible. Once on iRecord, the data were then queued to be approved by experts.

After all surveys were completed and all the data were transcribed into Excel and checked by the Education and Interpretation Officer, they were submitted to DASSH (The archive for marine species and habitats data) based at the Marine Biological Association who will store the records locally and shared with MEDIN (Marine Environmental Data and Information Network).

### 3. Results & Discussion

Over the course of 18 months, 23 successful surveys were completed in four locations. Metadata and the full list of species records can be seen in Appendix 2 and 3.

#### 3.1. Species records

During 23 surveys a total of 1077 species were recorded, of which 441 of those species were unique records between all four locations: Combe Martin, Croyde, Lee Bay and Westward Ho!. Figure 3 depicts the number of records and uniques species records in each location. Species diversity was greatest at Lee Bay with 127 unique species recorded against the least at Westward Ho! (93).

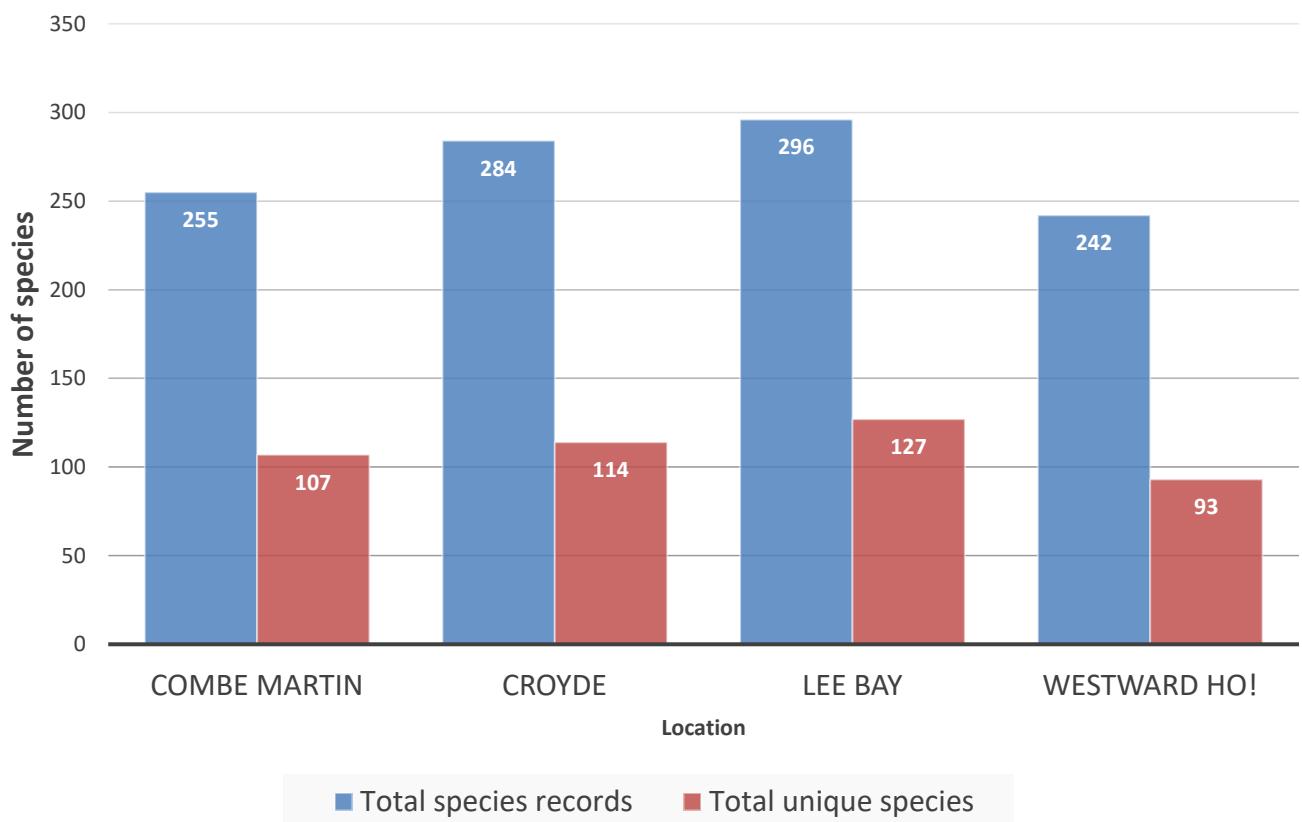

Figure 3: Total number of species recorded and total number of unique species recorded in each location.

We should consider survey effort when taking into account the differences between locations as the results from Figure 3 could suggest that more volunteers came to Lee Bay surveys than Westward Ho! surveys.

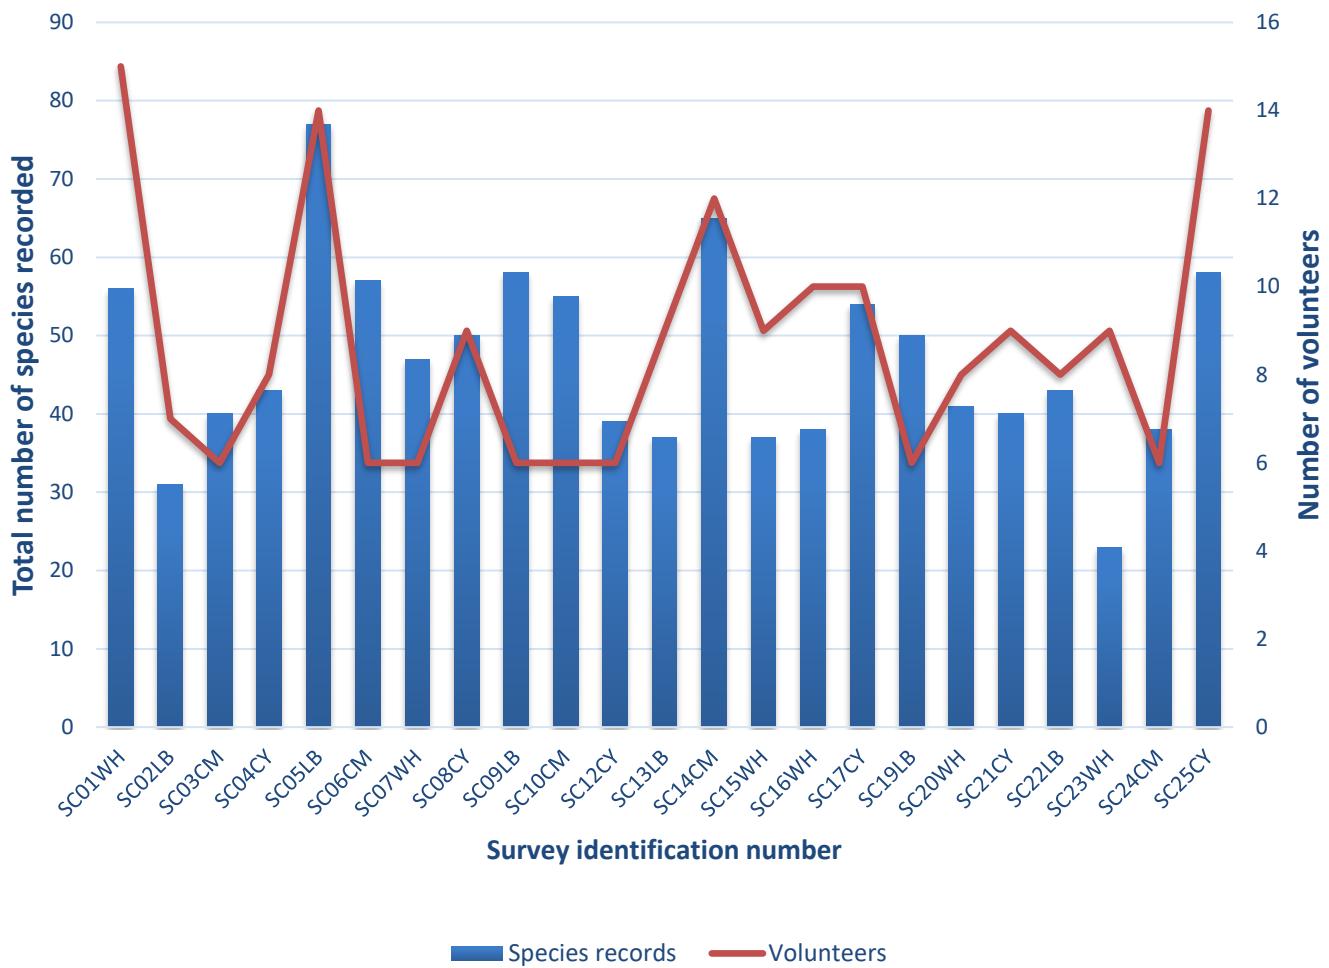

Figure 4 depicts number of volunteers against number of species recorded at each survey.

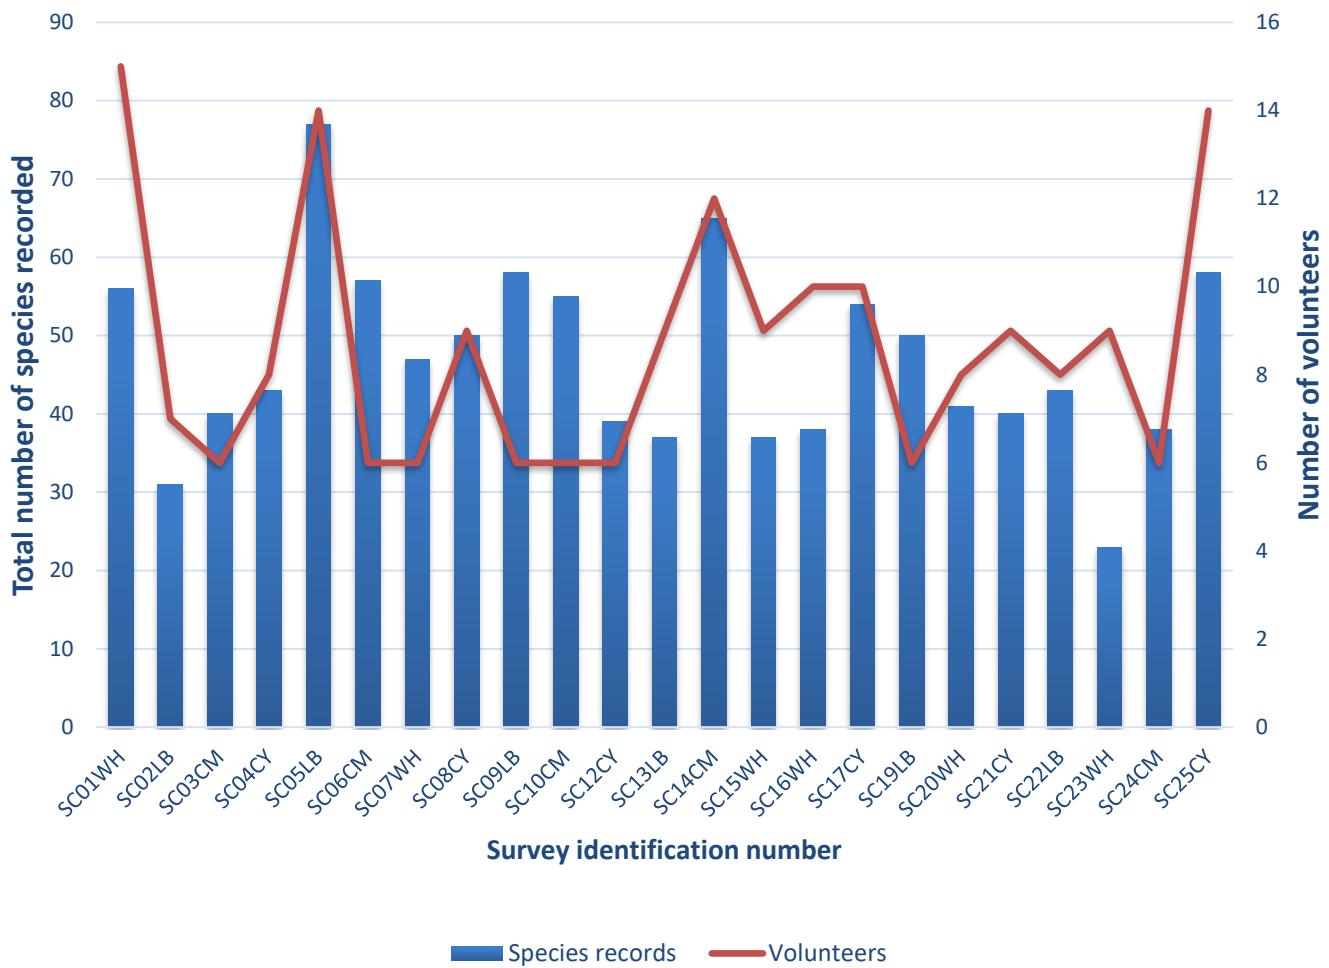

Figure 4: Graph depicting survey effort comparing number of species recorded each survey against the number of volunteers conducting the survey. In the survey identification number, the last two letters refer to the location: WH = Westward Ho!, LB = Lee Bay, CM = Combe Martin, CY = Croyde.

In

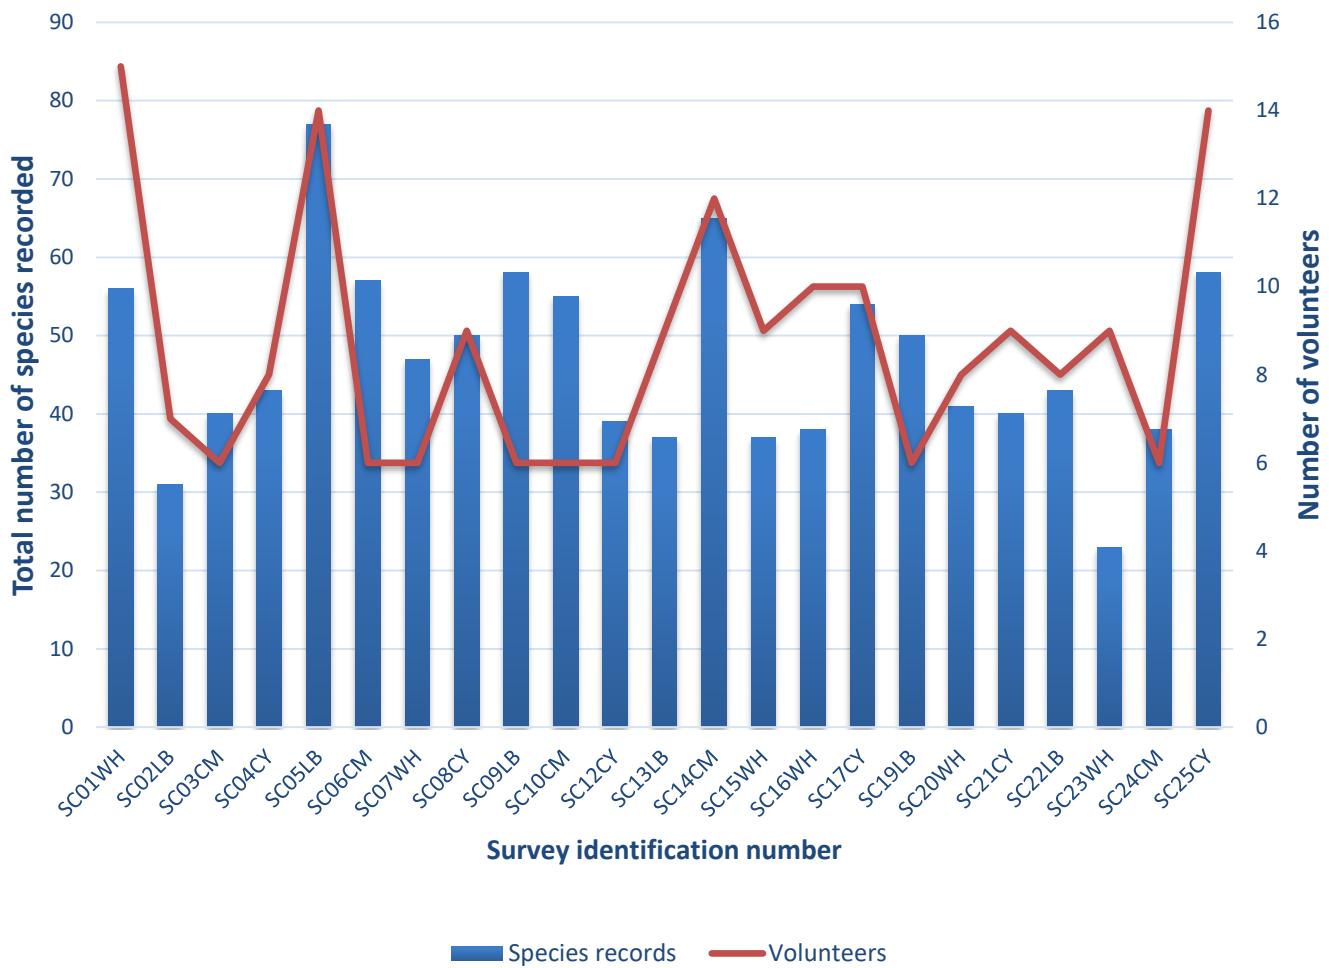

Figure 4 it points towards the fact that the surveys which recorded the most species (SC05LB = 77 species, SC14CM = 65 species, SC25CY = 58 species and SC09LB = 58 species) had three out of the four highest numbers of volunteers attending those surveys out of the whole series. Therefore it could be suggested that more species were recorded on surveys with more volunteers. Since these values were spread across all locations except Combe Martin, no-corrections were made for futher data comparisons.

### 3.2. Taxonomic group composition in each location

Species data were recorded into general marine phyla (taxonomic group) and therefore it is easy to make comparisons about which location was the most and least productive. For these comparisons, the unique species dataset was used which simply denotes if a species was present or absence at each location and does not refer to how many times that species was recorded (Figure 5).

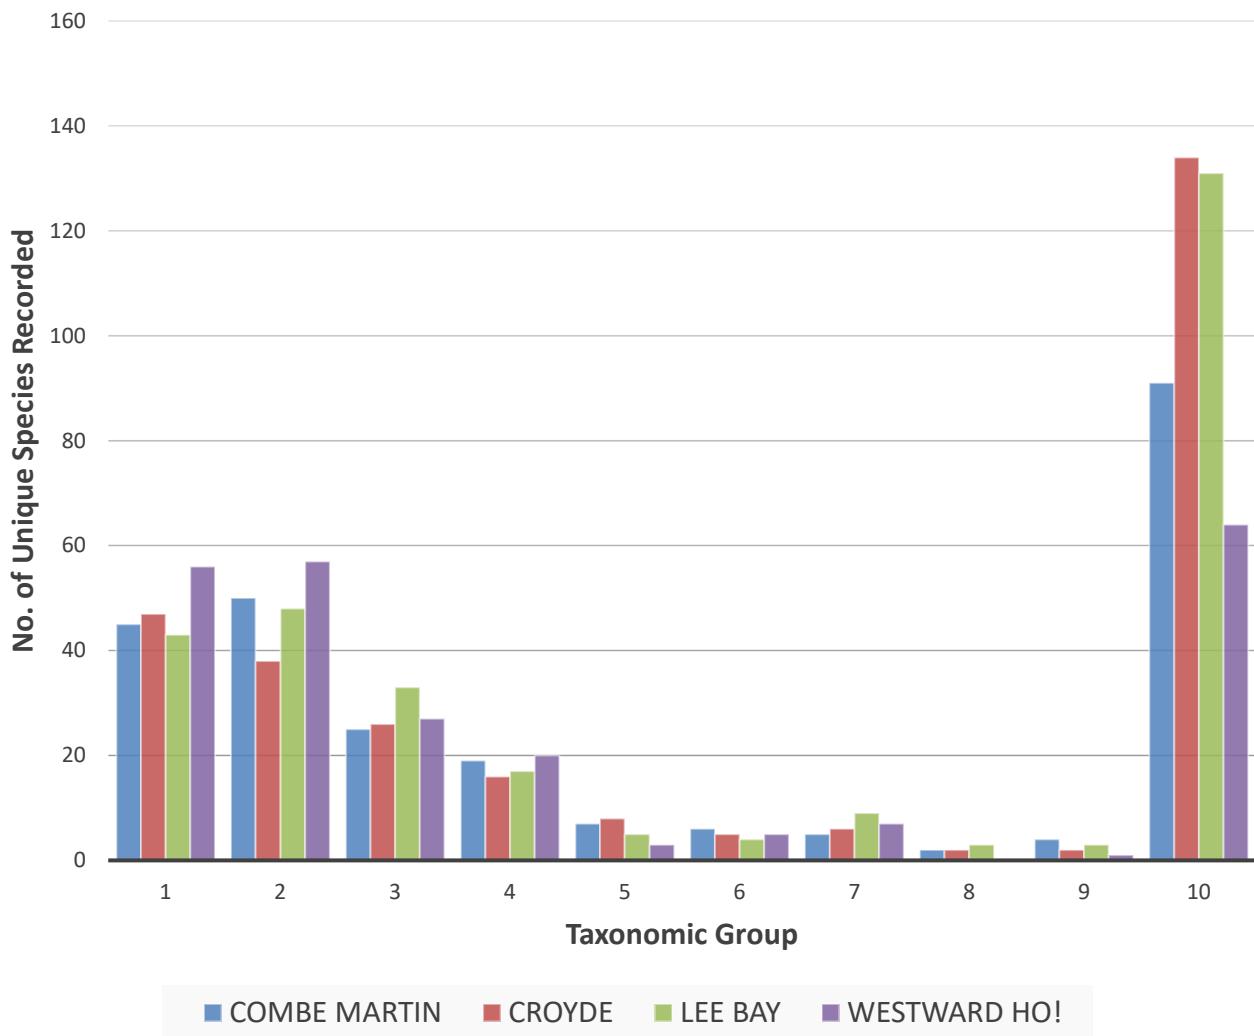

Figure 5: Number of unique species recorded in each taxonomic group in each location. Where 1 = Arthropods, 2 = Molluscs, 3 = Cnidarians 4 = Annelids, 5 = Bryozoans 6 = Porifera 7 = Pisces 8 = Ascidiants 9 = Echinoerms 10 = Algae

Looking at Figure 5, it is clear that algae was the most recorded of all the taxonomic groups with the most species being recorded at Lee Bay. This is most likely due to the sheltered rocky shore at Lee Bay, allowing greater protection for more species of algae to grow and escape relentless prevailing winds and waves which batter much of the North Devon coastline.

Figure 6 shows the percentage breakdown of each taxonomic group in each location. From this graph it can be seen that molluscs, cnidarians and algae make up most of the spcecies composition at Westward Ho! however it also shows that algae is much more dominant in other locations than Westward Ho!.

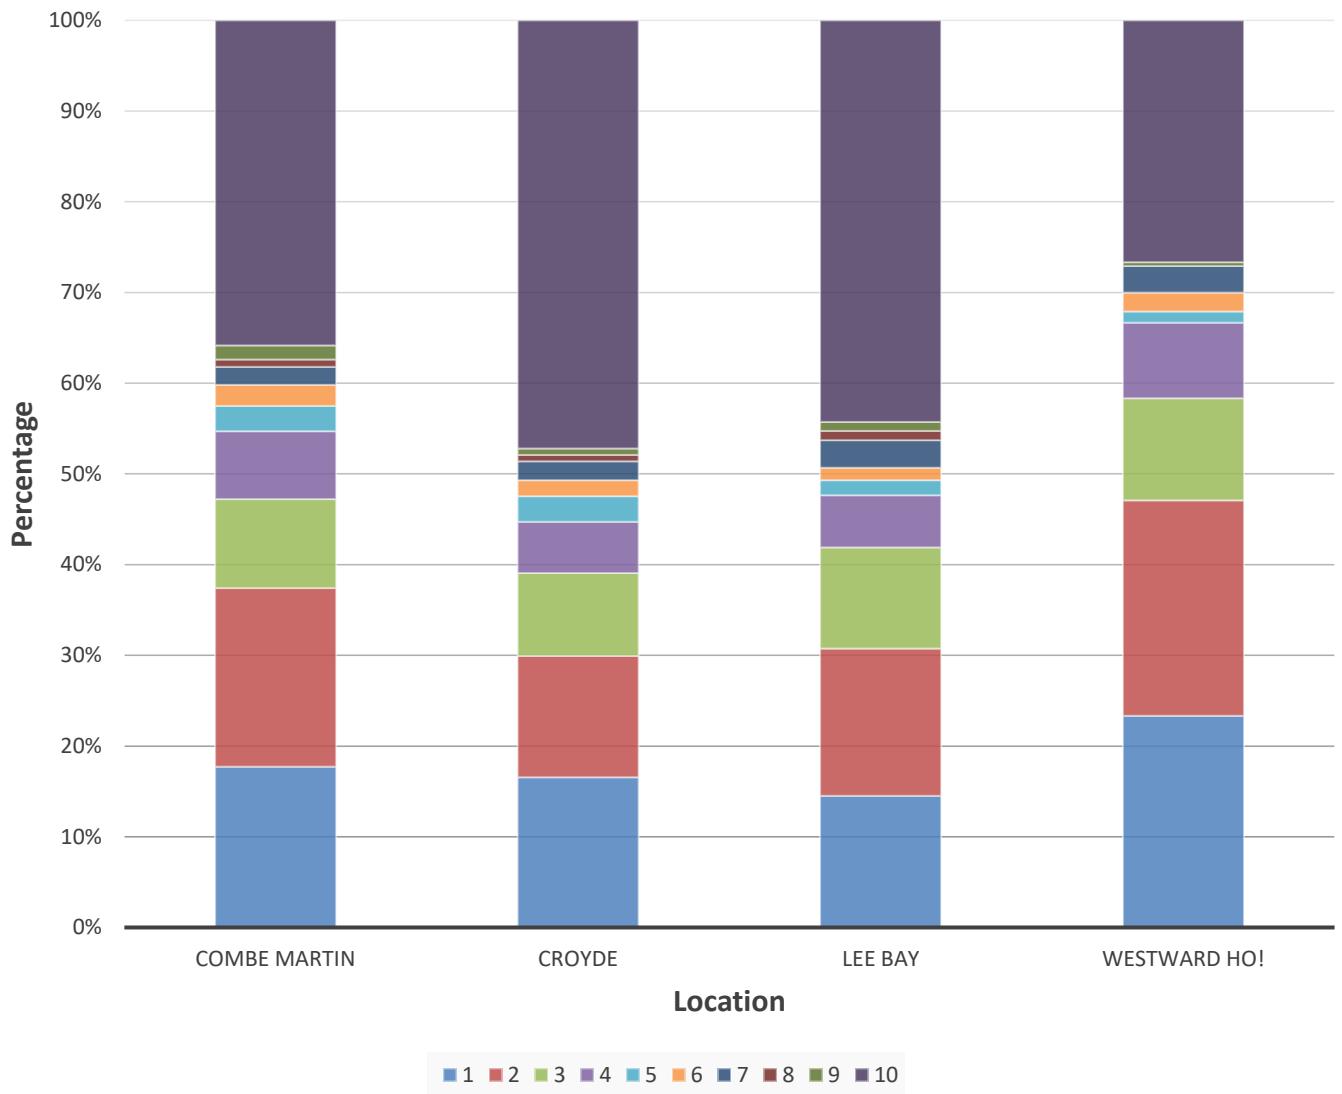

Figure 6: Taxonomic group composition broken down as a percentage using unique species data in each location. Where 1 = Arthropods, 2 = Molluscs, 3 = Cnidarians 4 = Annelids, 5 = Bryozoans 6 = Porifera 7 = Pisces 8 = Ascidiants 9 = Echinoerms 10 = Algae

Figure 7 displays this information in a different way as it shows each taxonomic group broken down into each location. It shows which location has the greatest diversity of each taxonomic group. Out of the ten groups analysed, Lee Bay has either the greatest or joint top greatest species diversity in eight of the taxonomic groups. The number of species recorded of porifera (8), ascidiants (6) and echinoderms (5) were low which indicates towards lack of expertise in identifying these species in the field, certainly for porifera and ascidiants as there were many species that we the surveyors did not have the skills to identify other than the most common, easily identifiable species. It is possible that the most algae was recorded in Lee Bay and Croyde due to our best algae surveyor living closest to those locations and therefore coming to more of those surveys. It is however possible that this is an accurate depiction of these locations considering that the number of species samples (179) is high enough to draw that conclusion.

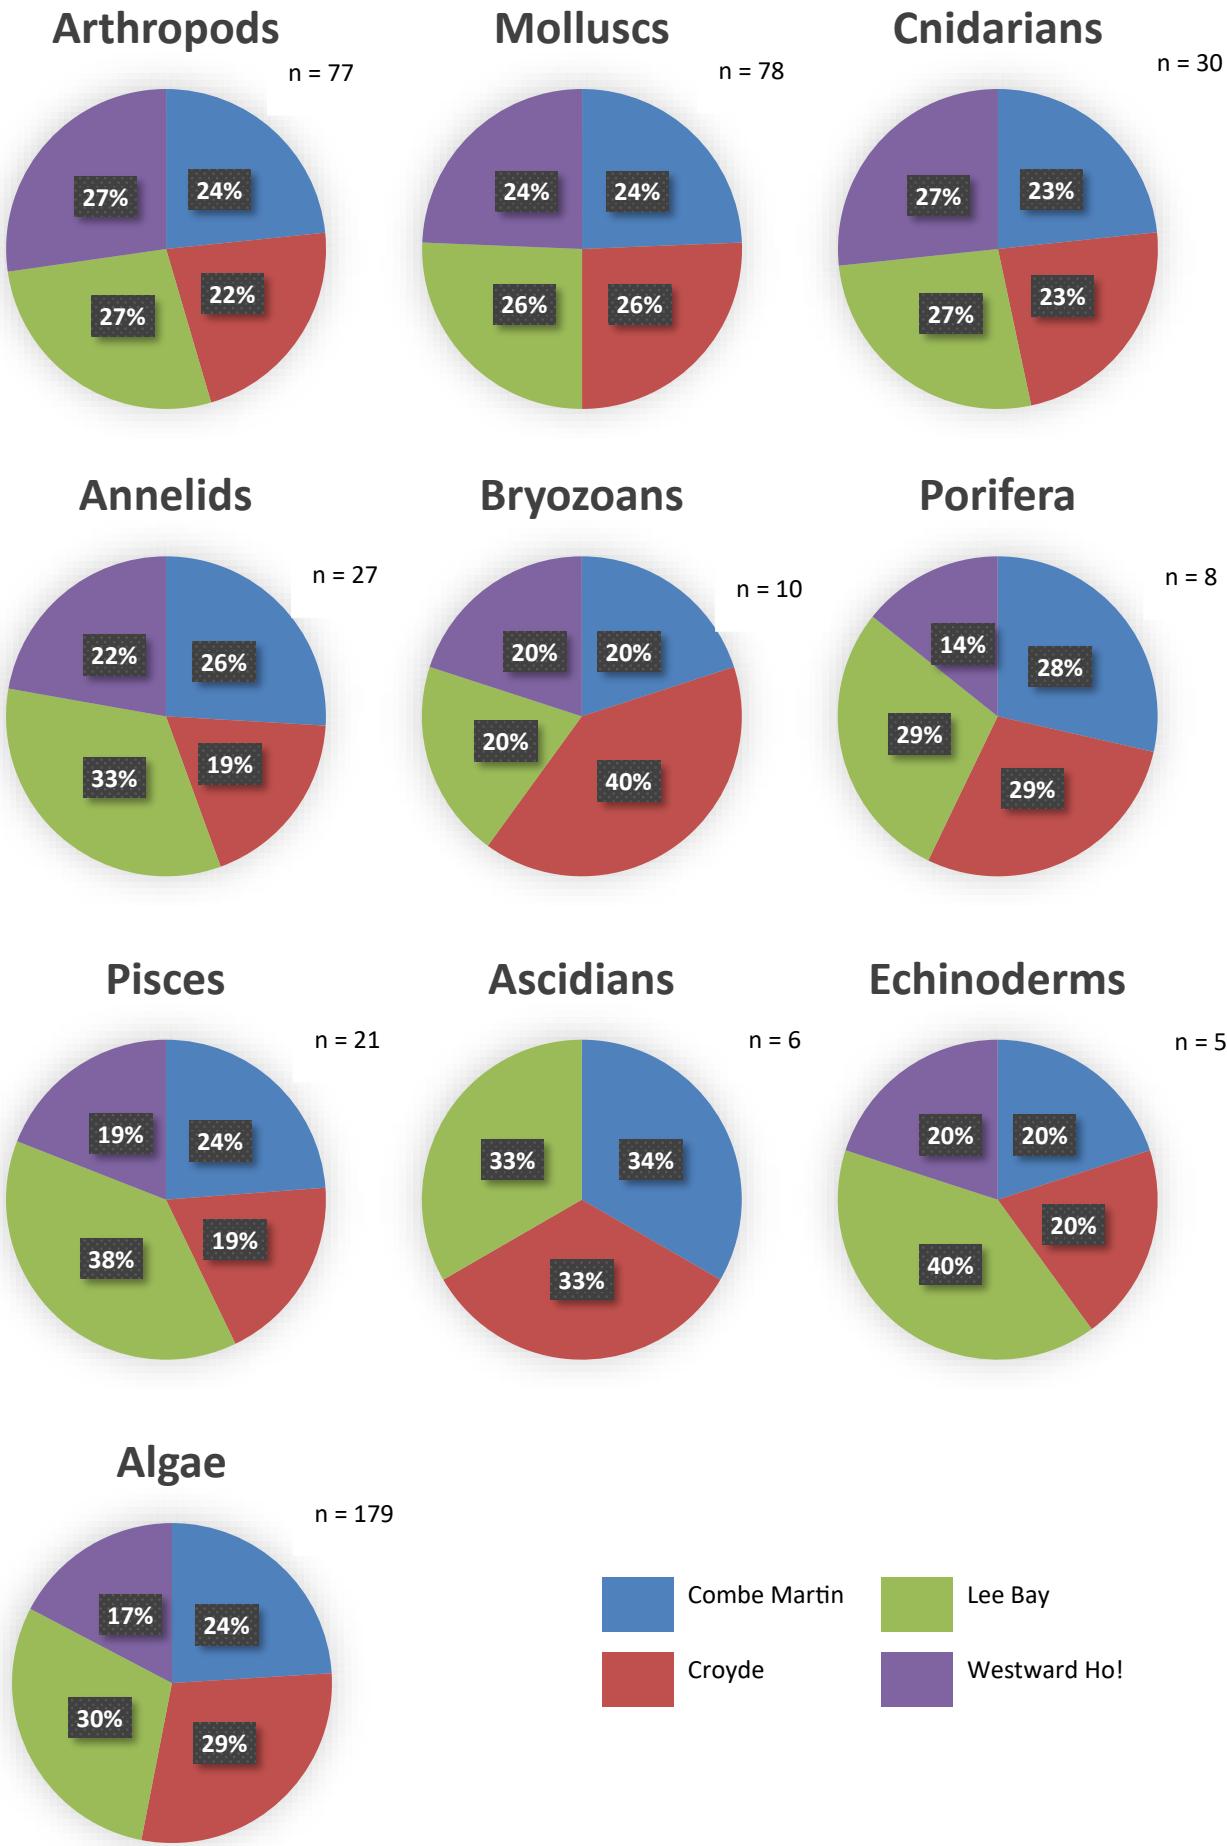

Figure 7: Taxonomic groups divided into survey location using unique species records. n = denotes the number of species surveyed in that taxonomic group.

### 3.3. Taxonomic group composition during each season

Surveys were conducted throughout the year with approximately two surveys each month during the lowest spring and neap tides spaced about two weeks apart. No surveys were conducted in January 2018 and two surveys had to be cancelled at Westward Ho! in autumn and Combe Martin in spring due to inclement weather. Seasons were allocated as follows: winter (December to February), spring (March to May), summer (June to August) and autumn (September to November). Figure 8 shows the number of surveys successfully conducted at each location during each season.

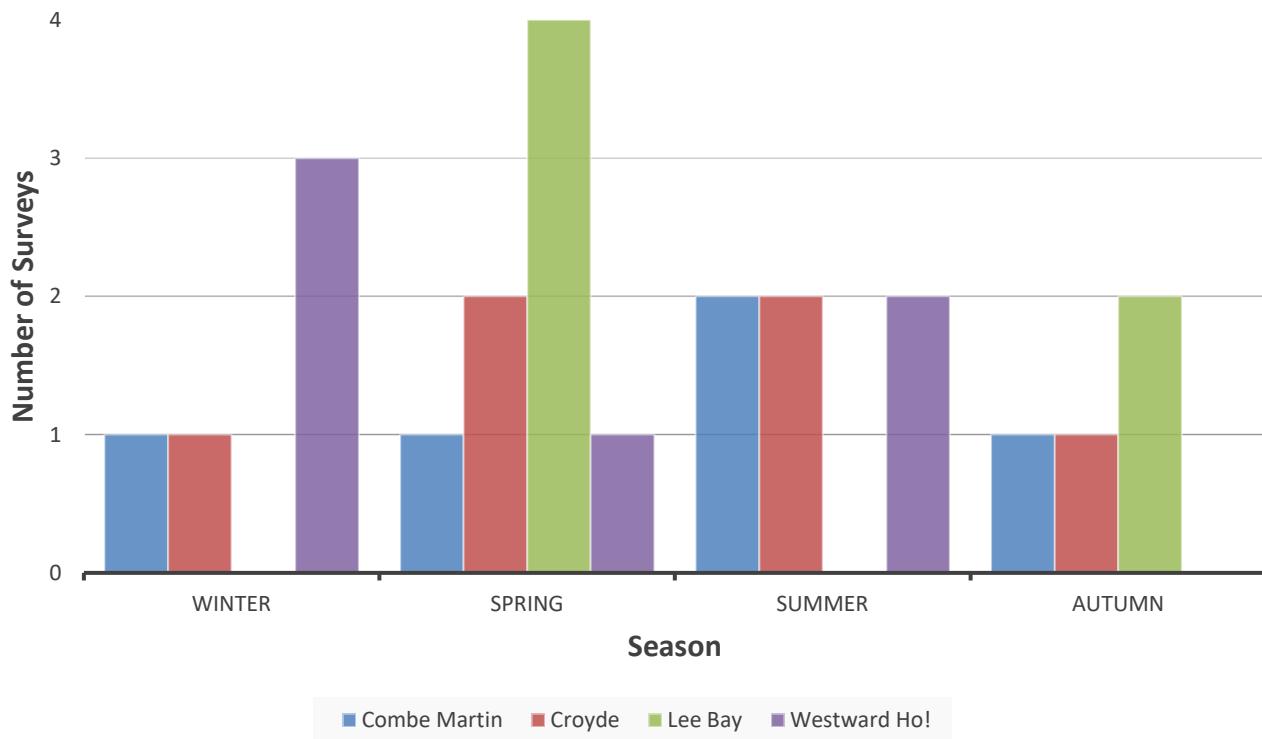

Figure 8: Number of surveys conducted at each location during each season.

Most of the surveys completed were carried out during spring (8) and the least were carried out during autumn and winter (5). This can be explained due to volunteer and staff availability, spring months were favoured as they were out of the school holidays and therefore the beach locations could be easily accessed. School holidays were avoided as parking close to survey locations was often difficult and travel time to the locations would be considerably longer. It is evident from Figure 8 that no surveys were carried out at Lee Bay in the winter or summer and half of the surveys conducted at Westward Ho! were in the winter, with no surveys completed there in autumn months. It's true that species are more productive in the spring months which could explain why Lee Bay has been recorded as the most biodiverse location.

To compare seasonal differences the records were compared against each location using all species records (Figure 9).

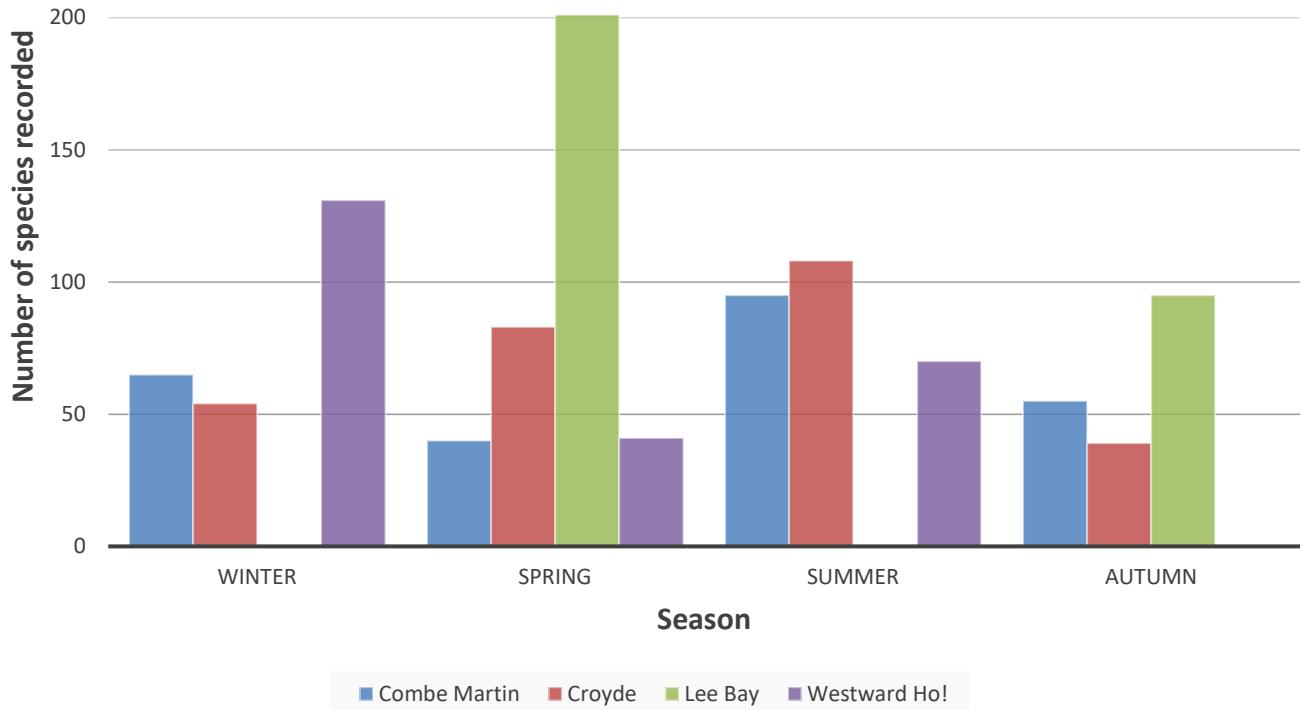

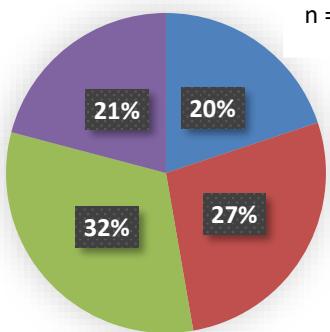

Figure 9: Number of species recorded each season in each location.

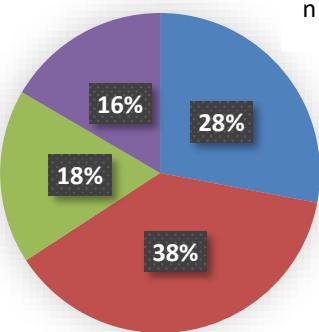

Spring was seen to be the most productive month with 365 species recorded (34%), summer was the next most productive month with 273 records (25%). In winter 250 species (23%) were recorded and 189 in autumn. Despite Figure 9 closely reflects Figure 8 with an average of 47 species recorded across all locations.

All species records were used to compare the taxonomic groups against season (Figure 10). Spring was the most diverse season for mollscs, cnidarians, annelids and algae whilst summer was the most diverse season for arthropods which is logical as the life cycle of many crustaceans such as prawns and shrimp produces greatest number in the summer months in the warmer weather. Algae was considerably most diverse in the spring, possibly because more surveys were completed in those months or it could correlate with terrestrial spring patterns with many species thriving at this time of year. Pisces and bryozoans were more diverse in autumn and as well as arthropods, porifera and ascidians were most diverse in summer.

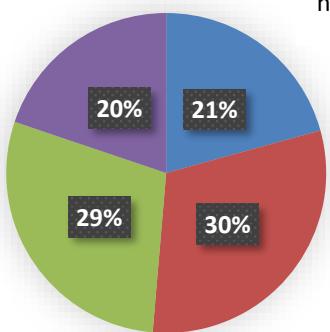

## Arthropods

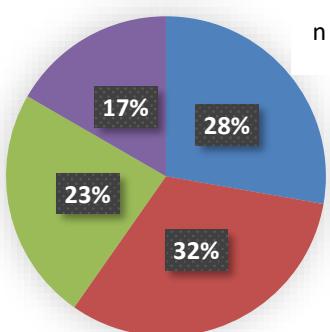

## Molluscs

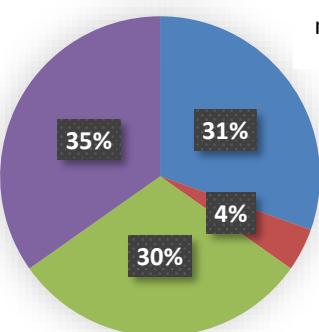

## Cnidarians

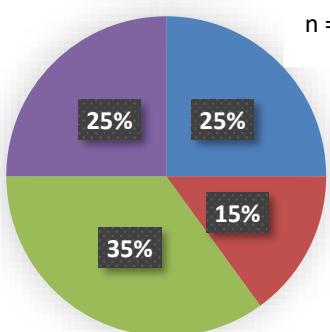

## Annelids

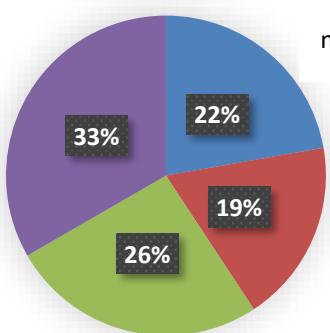

## Bryozoans

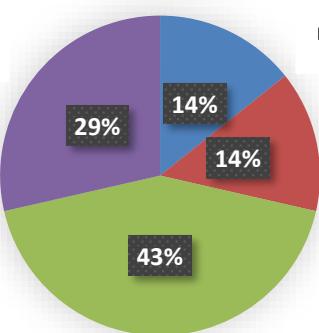

## Porifera

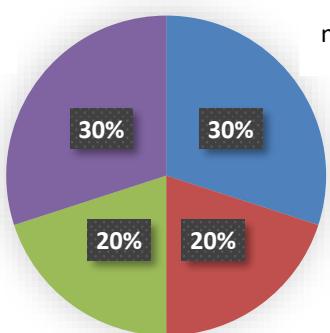

## Pisces

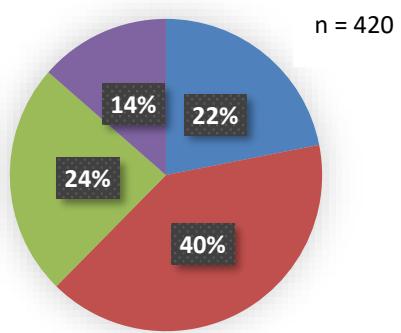

## Ascidians

## Algae

Winter      Summer  
 Spring      Autumn

Figure 10: Taxonomic groups divided into season using all species records. n = denotes the number of species surveyed in that taxonomic group.

### 3.4. Invasive and non-native species

During all surveys invasive, non-native species and climate change indicator species were recorded as part of the normal survey methodology. These species may have travelled to North Devon via visiting vessels (ballast water) and ocean currents. Many non-native invasive species are not good news for local species as non-native species can outcompete them meaning that there is less habitat available for native species. Climate change indicator species are very good to monitor as they give us an indication on what's happening with warming waters where more species are likely to move to northern waters as their temperature range extends.

Table 1 shows the locations where the species were found. Some species were more widely found than others, for instance *Sargassum muticum* and *Austrominius modestus* have been recorded in North Devon for decades. However *Perophora japonica* was first noticed by surveyors in 2017 when it was brought to our attention by ecologist Dave Fenwick during a survey at Lee Bay in September 2017 ([www.aphotomarine.com](http://www.aphotomarine.com)). This species is easy to identify once the surveyor is aware of the identification features and it's likely that it will spread to other locations if it's not there already.

Table 1: Invasive, non-native species and climate change indicator species (CCIS) recorded during species census surveys.

Species	Description	Combe Martin	Croyde	Lee Bay	Westward Ho!
<i>Perophora japonica</i>	Non-native sea squirt			Present	
<i>Caulacanthus ustulatus</i>	Non-native invasive red seaweed	Present		Present	
<i>Austrominius modestus</i>	Non-native barnacle	Present	Present	Present	Present
<i>Sargassum muticum</i>	Non-native invasive brown seaweed	Present	Present	Present	Present
<i>Magallana gigas</i>	Pacific oyster Non-native species		Present		
<i>Calliostoma zizyphinum</i>	Painted top shell CCIS	Present		Present	Present
<i>Onchidella celtica</i>	Celtic sea slug CCIS		Present		
<i>Halurus equisetifolius</i>	Red algae CCIS		Present		

Climate change indicator species *Onchidella celtica* has been recorded in North Devon for many years but has only been recorded at Croyde, Woolacombe and Saunton beaches. It has not yet made its way to other survey locations which could possibly be due to substrata, exposure and habitat suitability.

## 4. Bioblitz Events

BioBlitz (mass surveying) events were carried out throughout the project and were running at all four locations including terrestrial surveying as well as the intertidal zone. Survey areas of each location are included in Appendix 4. The BioBlitz took place on the following dates:

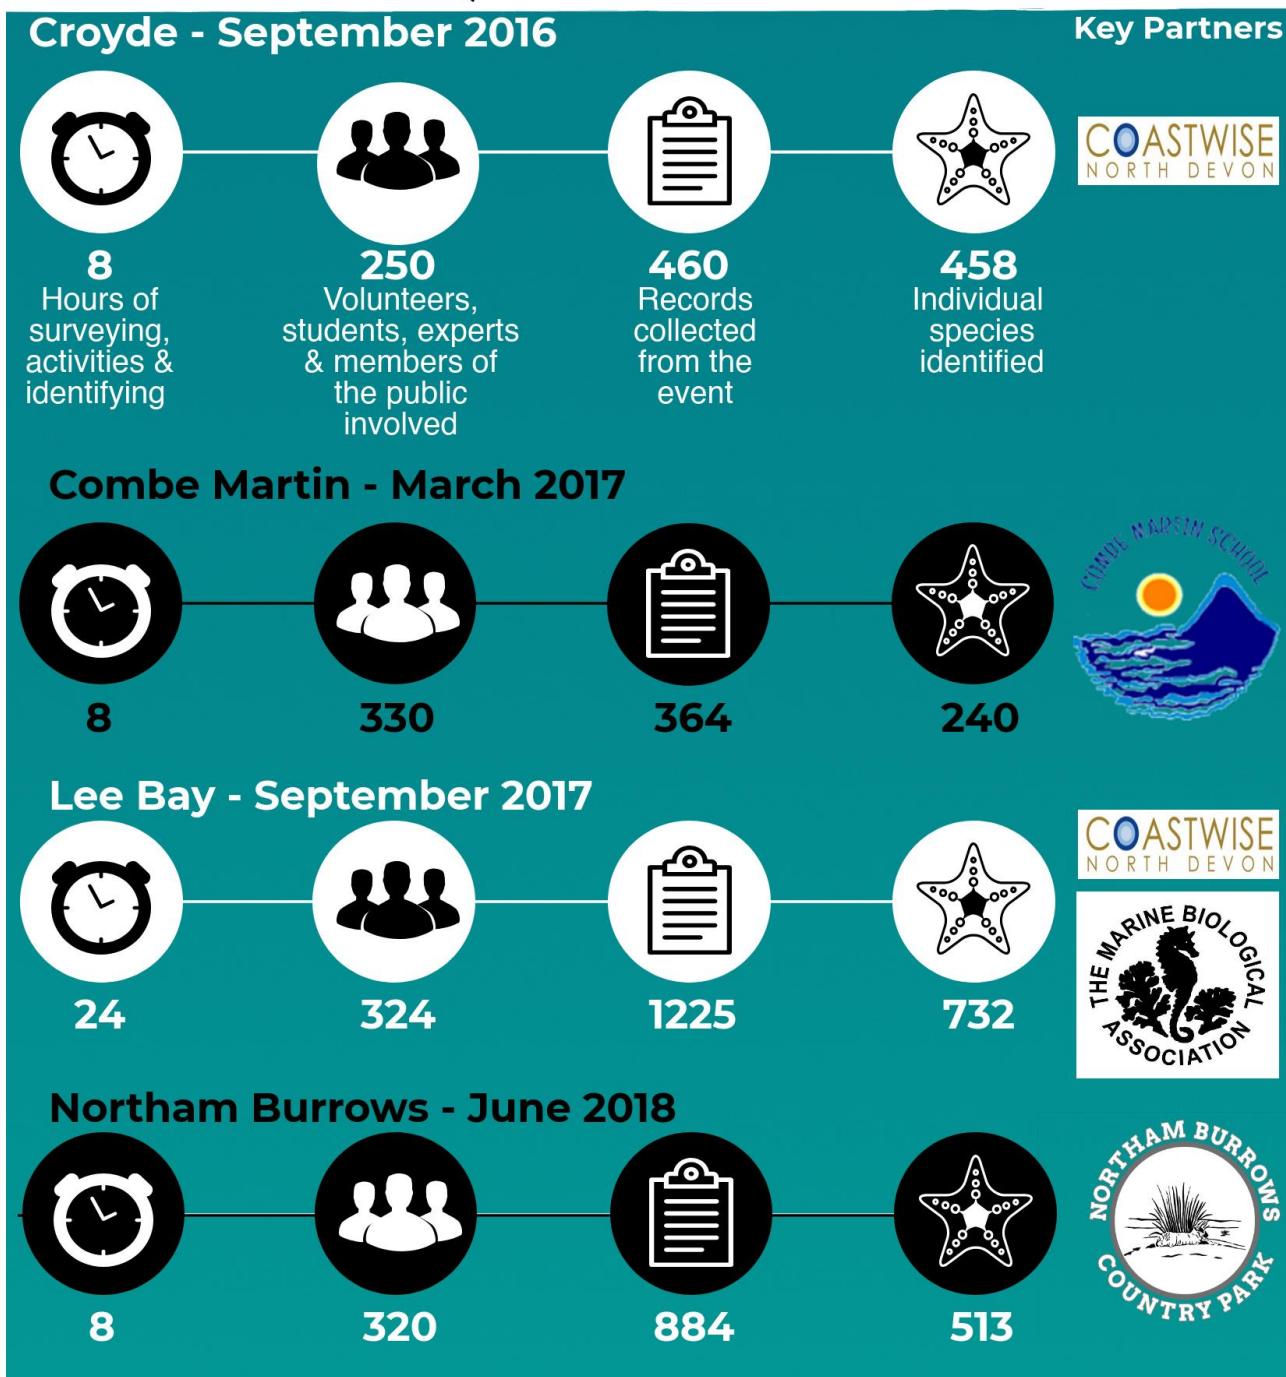

- Croyde – 17<sup>th</sup> September 2016
- Combe Martin – 13<sup>th</sup> March 2017
- Lee Bay – 22<sup>nd</sup> and 23<sup>rd</sup> September 2017
- Northam Burrows – 15<sup>th</sup> June 2018.

All events were run over a period of 8 hours except Lee bay BioBlitz which was 24 hours and ran over a period of two days. The records collected during these surveys have all been managed by DASSH and uploaded to the NBN Atlas available for public download. A summary of number of key highlights from each BioBlitz are summarised in Figure 11.

Each BioBlitz had different key partners involved in the running of the event. Coastwise North Devon were the key partner running the Croyde BioBlitz where we engaged with 250 members of the public, volunteers and experts. Combe Martin was run closely with Combe Martin School where all pupils attended the day as well as three other visiting school groups. Lee Bay BioBlitz was run along side the Marine Biological Association and Coastwise North Devon who both brought a wealth of experience running BioBlitzes. This was a very successful event with 732 unique species being recorded and three local schools (180 students) participating in activities. A summary of the Lee Bay BioBlitz, produced by the Marine Biological Association can be seen in Figure 12. Northam Burrows BioBlitz was run in partnership with the Northam Burrows Country Park where 513 unique species were recorded. Four local schools attended that BioBlitz. Figure 1

## Summary of BioBlitz Events 2016 - 2018

With thanks to funding from:

Individual  
species  
identified

## Activities

## Species overview

## With thanks to...

Our BioBlitz partners, North Devon Coast AONB and Coastwise North Devon for help with organising the event.

All the wonderful organisations, volunteers and experts that came along and supported the event.

We are also very grateful to our funders: the Heritage Lottery Fund and Fullabrook CIC.

Figure 12: Summary of the Lee Bay BioBlitz, run in September 2017.

## 5. Conclusion and Recommendations

These surveys were carried out to gain a greater understanding of intertidal species found along the North Devon Coast AONB and to compare locations regarding which species are best to find at each location and what time of the year is best to see them (Table 2). This information could aid future interpretation on coastal diversity.

*Table 2: What and where? A table depicting which animals or plants people are most likely to see when visiting each location and at what time of year.*

Location	Best place to find...	When	Where to look for them on the shore
Combe Martin	Arthropods (crabs, prawns, shrimp and barnacles)	Spring	In rockpools (prawns and shrimp) under rocks (crabs) and on top of rocks (barnacles) all over the shore.
	Porifera (sponges)	Summer	On the low shore on rock walls and in crevices.
Croyde	Algae (seaweeds)	Spring	All over the shore but the most seaweeds can be found at low shore
	Annelids (worms)	Spring and winter	In the sand, on top of rocks and under rocks all over the shore.
Lee Bay	Algae (seaweeds)	Spring	All over the shore but the most seaweeds can be found at low shore
	Pisces (fish)	Autumn	In pools all over the shore, often amongst the seaweed
Westward Ho!	Cnidarians (anemones and hydroids)	Spring and summer	All of the shore – you'll see many anemones stuck on rocks in pools and higher up the rocks too, Some bury into sand.
	Arthropods (crabs, prawns, shrimp and barnacles)	Spring	In rockpools (prawns and shrimp) under rocks (crabs) and on top of rocks (barnacles) all over the shore.

Due to the Coastal Creatures project ending and the Education and Interpretation Officer leaving the role, these surveys will no longer be managed by the North Devon Coast AONB. The surveying group was mainly comprised of Coastwise North Devon members who carried out these types of surveys before Coastal Creatures and will continue to do so after the project has ended. It has been proposed that alternative beaches along the North Devon coast are surveyed to give some variety to surveyors and paint a bigger picture of intertidal species diversity. For 11 years Coastwise North Devon have participated in the Marine Biological Association ShoreThing surveys. Coastwise will no longer do these surveys as the ShoreThing project has also ended. Instead they will focus on doing a non-native invasive species and climate change

indicator species survey twice a year at Lee Bay and Westward Ho! beaches to continue observing if new species are arriving to North Devon. These data will be inputted into iNaturalist ([www.inaturalist.org](http://www.inaturalist.org)).

## 6. Acknowledgements

The Coastal Creatures project was funded by the Heritage Lottery Fund and run by the North Devon Coast AONB. The survey methodology was developed with Coastwise North Devon who are a partner in the Coastal Creatures project.

Considerable thanks are given to all volunteers who dedicated their own time to learning survey methodology, improving their skills by attending specialist species identification courses, attending surveys and transcribing data from forms to the computer and further onto online recording platforms. Volunteers involved in the above who we'd like to give thanks to are:

## Appendix 3: Full list of species records

Survey ID	Common Name	Scientific Name	Taxonomic group	Photo Number(s)	Zone (H/M/L)	SACFOR	Surveyors	Camera Number	Season
SC01WH	Barnacle, an acorn	<i>Austrominius modestus</i>	1	20	L		Cat Oliver & Jane Hamilton	6	1
SC01WH	Barnacle, an acorn	<i>Balanus crenatus</i>	1	19	L		Cat Oliver & Jane Hamilton	6	1
SC01WH	Broad clawed porcelain crab	<i>Porcellana platycheles</i>	1	50	L		Cat Oliver & Jane Hamilton	6	1
SC01WH	Edible crab	<i>Cancer pagurus</i>	1	37, 36	L		Cat Oliver & Jane Hamilton	6	1
SC01WH	Hermit crab	<i>Pagurus berhardus</i>	1	54, 55, 56	L		Cat Oliver & Jane Hamilton	6	1
SC01WH	Risso's crab	<i>Xantho pilipes</i>	1	44, 43, 42	L		Cat Oliver & Jane Hamilton	6	1
SC01WH	Velvet swimming crab	<i>Necora puber</i>	1	50, 51			Janice Whittington & Tony Bown	3	1
SC01WH	Volcano Barnacle	<i>Perforatus perforatus</i>	1	14, 15	M		Cat Oliver & Jane Hamilton	6	1
SC01WH	Gammarus spp.		1	52, 53			Cat Oliver & Jane Hamilton	6	1
SC01WH	Bryozoan spp.		1	50	L		Cat Oliver & Jane Hamilton	6	1
SC01WH	Barnacle		1	19			Janice Whittington & Tony Bown	3	1
SC01WH	Blue mussel	<i>Mytilus edulis</i>	2	30	L	A	Pip Jollands & Marjorie Heath	7	1
SC01WH	Chiton spp.		2	52, 53			Cat Oliver & Jane Hamilton	6	1
SC01WH	Limpet, china	<i>Patella ulyssiponensis</i>	2	31, 32	L	R	Pip Jollands & Marjorie Heath	7	1
SC01WH	Limpet, common	<i>Patella vulgata</i>	2	20	L	C	Pip Jollands & Marjorie Heath	7	1
SC01WH	Periwinkle, common	<i>Littorina littorea</i>	2	27	L	C	Pip Jollands & Marjorie Heath	7	1
SC01WH	Periwinkle, rough	<i>Littorina saxatilis</i>	2	34, 35	L	F	Pip Jollands & Marjorie Heath	7	1
SC01WH	Periwinkle, small	<i>Melarhaphe neritoides</i>	2	33, 36	L	F	Pip Jollands & Marjorie Heath	7	1
SC01WH	Sea hare	<i>Aplysia punctate</i>	2	48	L		Muriel Lindsay & Nicola Mello	8	1
SC01WH	Topshell, flat	<i>Gibbula umbilicalis</i>	2	25	L	C	Pip Jollands & Marjorie Heath	7	1
SC01WH	Topshell, toothed	<i>Phorcus lineatus</i>	2	28	L	C	Pip Jollands & Marjorie Heath	7	1
SC01WH	Whelk, dog	<i>Nucella lapillus</i>	2	26	L		Pip Jollands & Marjorie Heath	7	1
SC01WH	Whelk, netted dog	<i>Hinia reticulata</i>	2	17			D. Halesno	5	1
SC01WH	Whelk, sting winkle	<i>Ocenebra erinacea</i>	2	19			Janice Whittington & Tony Bown	3	1
SC01WH	Blue Rayed Limpet	<i>Patella pellucida</i>	2	28, 29			Janice Whittington & Tony Bown	3	1
SC01WH	Beadlet anemone	<i>Actinia equina</i>	3	19	L		Muriel Lindsay & Nicola Mello	8	1
SC01WH	Gem anemone	<i>Aulactinia verrucosa</i>	3	11	L		Muriel Lindsay & Nicola Mello	8	1

Survey ID	Common Name	Scientific Name	Taxonomic group	Photo Number(s)	Zone (H/M/L)	SACFOR	Surveyors	Camera Number	Season
SC01WH	Glaucus pimplet	<i>Anthopleura thallia</i>	3	8	M		Muriel Lindsay & Nicola Mello	8	1
SC01WH	Snakelocks anemone	<i>Anemonia viridis</i>	3	43/42?	L		Muriel Lindsay & Nicola Mello	8	1
SC01WH	Strawberry anemone	<i>Actinia fragacea</i>	3	13	L	0	Cat Oliver & Jane Hamilton	6	1
SC01WH	Honeycomb worm	<i>Sabellaria alveolata</i>	4	12	L	0	Cat Oliver & Jane Hamilton	6	1
SC01WH	Keel worm	<i>Spirobranchus lamarcki</i>	4	20	L		Muriel Lindsay & Nicola Mello	8	1
SC01WH	Sand mason worm	<i>Lanice conchilega</i>	4	69			Janice Whittington & Tony Bown	3	1
SC01WH	Segmented Worm sp.		4	59			Janice Whittington & Tony Bown	3	1
SC01WH	Tube worm		4	17			Janice Whittington & Tony Bown	3	1
SC01WH	Sea mat, rounded cells	<i>Electra pilosa</i>	5	22, 21	L		Muriel Lindsay & Nicola Mello	8	1
SC01WH	Sea mat, squared cells	<i>Membranipora membranacea</i>	5	22, 21	L		Muriel Lindsay & Nicola Mello	8	1
SC01WH	Sea mat		5	37, 39			Janice Whittington & Tony Bown	3	1
SC01WH	Breadcrumb sponge	<i>Halichondria panacea</i>	6	13, 18	L		Muriel Lindsay & Nicola Mello	8	1
SC01WH	Sponge sp.		6	35			Janice Whittington & Tony Bown	3	1
SC01WH	Blenny, common	<i>Lipophrys pholis</i>	7	65			Janice Whittington & Tony Bown	3	1
SC01WH	Coral weed	<i>Corallina officianalis</i>	10	32	L,M	C	Jackie Marot & Holly Collingham	9	1
SC01WH	Dulse	<i>Palmaria palmata</i>	10	93	L		Glenys Beardsly & Paula Ferris	1	1
SC01WH	False Irish moss	<i>Mastocarpus stellatus</i>	10	82	L	C	Glenys Beardsly & Paula Ferris	1	1
SC01WH	Irish moss /carrageen	<i>Chondrus crispus</i>	10	33	L,M	C	Jackie Marot & Holly Collingham	9	1
SC01WH	Laver	<i>Porphyra umbilicalis</i>	10	31	L/M		Jack Wiggins & Dave Jenkins	10	1
SC01WH	Oarweed	<i>Laminaria digitata</i>	10	91, 92	L	R	Glenys Beardsly & Paula Ferris	1	1
SC01WH	Pepper dulse	<i>Osmundea pinnatifida</i>	10	43, 31	L,M	A	Jackie Marot & Holly Collingham	9	1
SC01WH	Pink encrusting algae	<i>Lithothamnion spp.</i>	10	35	L,M	F	Jackie Marot & Holly Collingham	9	1
SC01WH	Sausage Weed	<i>Lomentaria articulata</i>	10	49	M		Jack Wiggins & Dave Jenkins	10	1
SC01WH	Sea lettuce	<i>Ulva lactuca</i>	10	34	L	O	Jackie Marot & Holly Collingham	9	1
SC01WH	Sugar kelp	<i>Saccharina latissima</i>	10	44	M	R	Jackie Marot & Holly Collingham	9	1
SC01WH	Wireweed	<i>Sargassum muticum</i>	10	42	M	R	Jackie Marot & Holly Collingham	9	1
SC01WH	Wrack, bladder	<i>Fucus vesiculosus</i>	10	30	L,M	A	Jackie Marot & Holly Collingham	9	1
SC01WH	Wrack, knotted	<i>Ascophyllum nodosum</i>	10	36	L,M	O	Jackie Marot & Holly Collingham	9	1
SC01WH	Wrack, spiral	<i>Fucus spiralis</i>	10	39	M	R	Jackie Marot & Holly Collingham	9	1

Survey ID	Common Name	Scientific Name	Taxonomic group	Photo Number(s)	Zone (H/M/L)	SACFOR	Surveyors	Camera Number	Season
SC01WH	Wrack, toothed	<i>Fucus serratus</i>	10	29	L,M	F	Jackie Marot & Holly Collingham	9	1
SC01WH	Tuning Folk Weed	<i>Bifucaria bificata</i>	10	40, 41	M	O	Jackie Marot & Holly Collingham	9	1
SC01WH	Creeping Chain Weed	<i>Catenella caespitosa</i>	10	37, 38	L,M	C	Jackie Marot & Holly Collingham	9	1
SC01WH	Red Algae		10	72			Janice Whittington & Tony Bown	3	1
SC01WH	Sand Binder weed	<i>Rhodothamniella floridula</i>	10	58		O	Glenys Beardsly & Paula Ferris	1	1
SC01WH	Serrated wrack	<i>Fucus serratus</i>	10	36, 37, 38			Janice Whittington & Tony Bown	3	1
SC01WH	Algae	<i>Cladostephus spongiosus</i>	10	83, 84, 85, 86, 87			Glenys Beardsly & Paula Ferris	1	1
SC01WH	Algae	<i>Plumaria elegans</i>	10	73, 74			Glenys Beardsly & Paula Ferris	1	1
SC01WH	Lichen species	<i>Lichina pygmaea</i>	10	56			Jack Wiggins & Dave Jenkins	10	1
SC02LB	Barnacle, an acorn	<i>Balanus crenatus</i>	1	93, 94			Cat Oliver, Tony Bown & Jane Hamilton	6	2
SC02LB	Edible crab	<i>Cancer pagurus</i>	1	87,88,89,90	L		Cat Oliver, Tony Bown & Jane Hamilton	6	2
SC02LB	Chiton spp.		2	29			Cat Oliver, Tony Bown & Jane Hamilton	2	2
SC02LB	Periwinkle, flat	<i>Littorina obtusata</i>	2	0017, 0018, 0019	L		Cat Oliver, Tony Bown & Jane Hamilton	2	2
SC02LB	Topshell, flat	<i>Gibbula umbilicalis</i>	2	0020, 0021	L		Cat Oliver, Tony Bown & Jane Hamilton	2	2
SC02LB	Topshell, grey	<i>Gibbula cineraria</i>	2	25, 26	L		Cat Oliver, Tony Bown & Jane Hamilton	2	2
SC02LB	Topshell, toothed	<i>Phorcus lineatus</i>	2	0022, 0023	L		Cat Oliver, Tony Bown & Jane Hamilton	2	2
SC02LB	Blue mussel	<i>Mytilus edulis</i>	2	114, 115	L		Cat Oliver, Tony Bown & Jane Hamilton	6	2
SC02LB	Limpet, common	<i>Patella vulgata</i>	2	0080, 0081	L		Cat Oliver, Tony Bown & Jane Hamilton	6	2

## Appendix 4: Location survey maps of BioBlitzes run during the Coastal Creatures project

North Devon  
**Bioblitz**  
 Combe Martin 2017

Zones

- 1. Rocky shore
  - 2. Strandline
  - 3. Stream
  - 4. Terrestrial
- 

Report all finds to the data desk at Base Camp.

Base Camp phone number: 07768 214597

Lee Memorial Hall  
Lee Bay, EX34 8LW

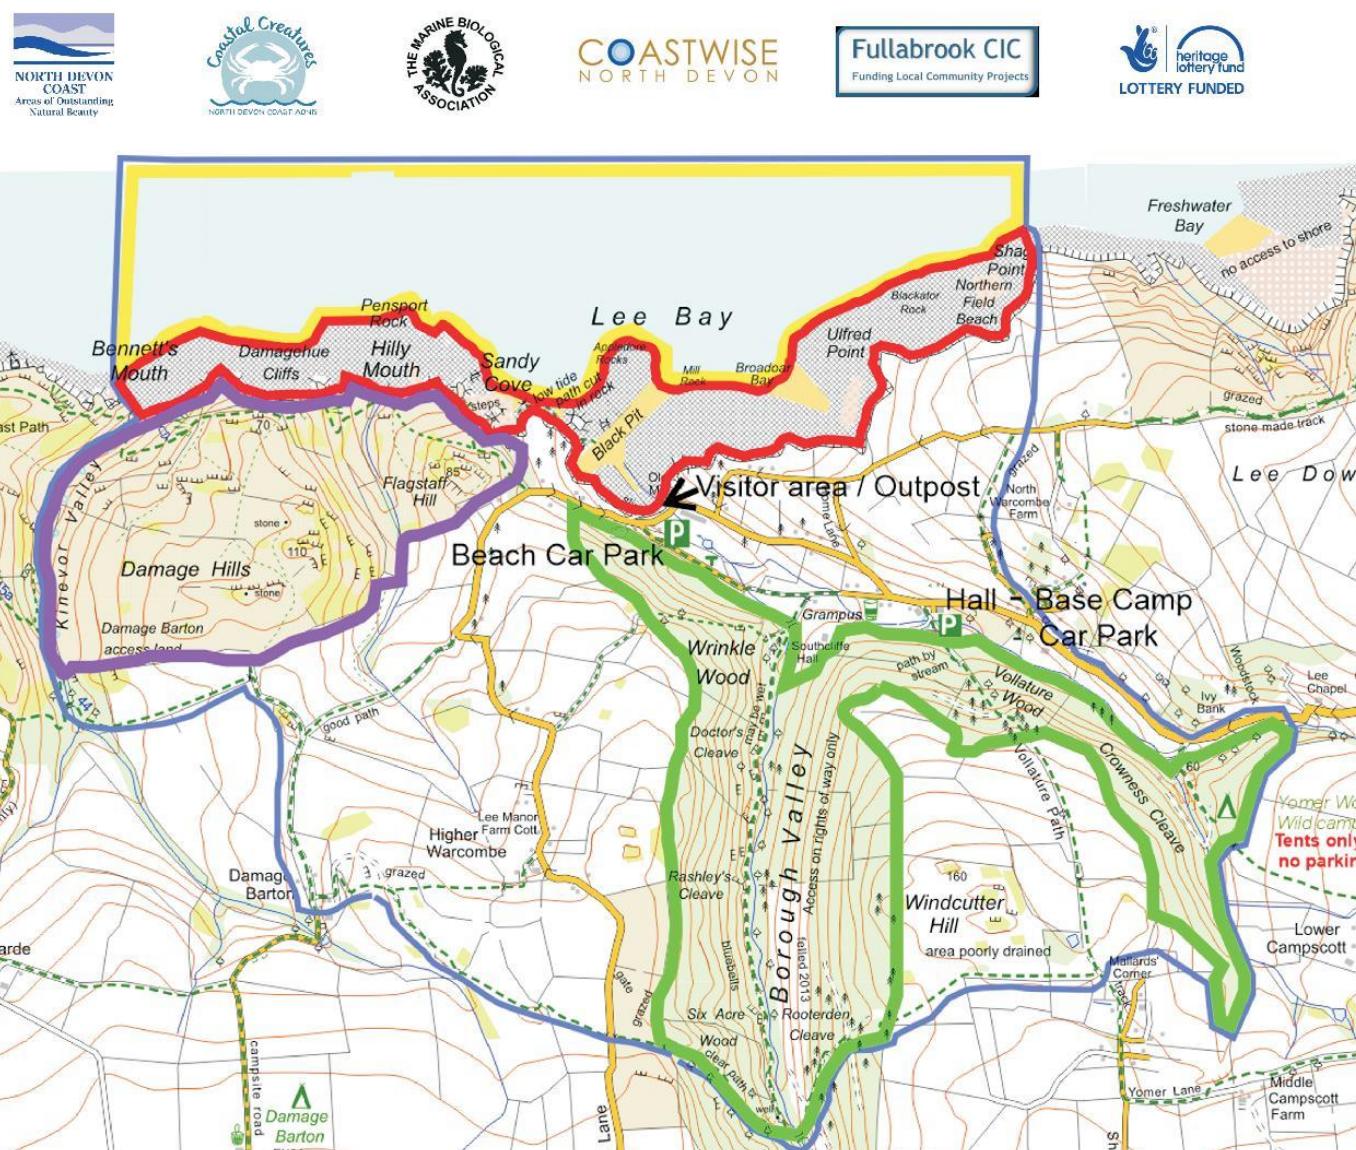

Fri, 22 Sep 2017, 10:30  
- Sat, 23 Sep 2017, 15.00

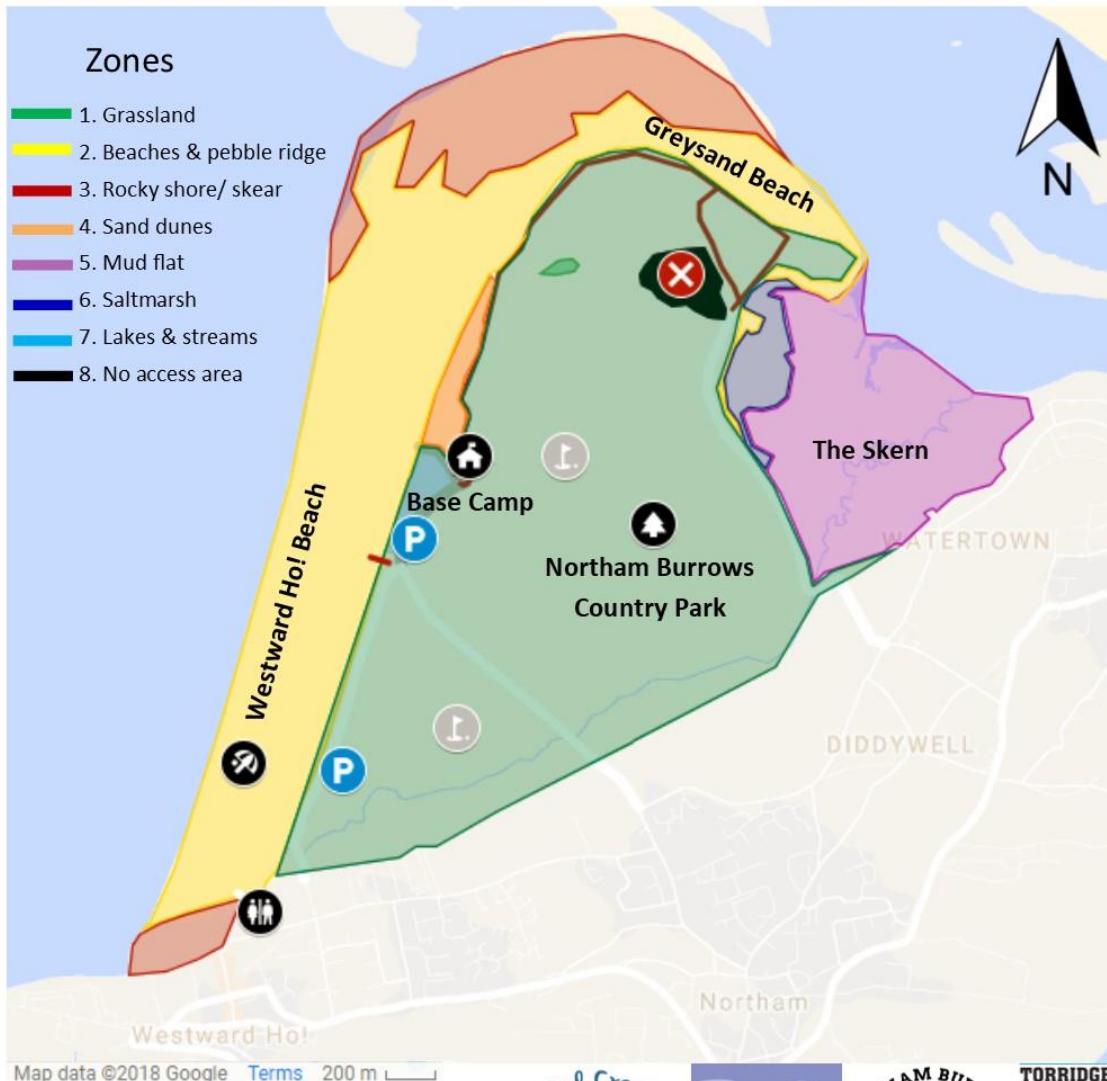

Grid ref: SS 485463

### Zones

Zones indicated on map do not imply unlimited access. Please use public rights of way only. Safe access to the foreshore is only available at Lee Bay and Sandy Cove. Most of the foreshore east of Lee Bay is inaccessible.

#### Rules & Guidance

- Register at Base Camp on Arrival
- Do not harm or damage any wildlife or habitats
- Keep dangerous equipment out of reach of children
- Under 16s must be accompanied by an adult
- Report all finds to the data desk in basecamp or email to catherine.oliver@devon.gov.uk
- Leave no litter and remove all traps, equipment and signage following the event
- Leave the site as you found it – return rocks and other objects to their exact location
- Do not collect or damage bird's eggs or nests
- Collect photos rather than specimens where possible for identification
- Where specimens are collected, these must be returned to where they came from
- Do not overfill buckets/collection pots with live animals
- Ensure you are appropriately dressed for the weather and survey you are undertaking
- Take care around waters edge
- Be alert for sharps (needles, broken glass etc.) when working on the shore and exploring undergrowth. Please inform Information desk if any are found.
